

Cow Income Monitor

The Cow Income Monitor shows the economic impact of individual cow performance. Choose 8 out of an available 42 optional information columns. These options can be changed on any test day at no additional cost. Choose the options that best suit your own herd management needs. All animals are grouped into first, second, or third + lactation groups and are ranked from highest to lowest milk value within the group based on their projection using multiple component pricing. Animals without a 305 day projection appear at the top of each group and will be ranked accordingly when they receive their first projection.

Default categories are highlighted.
